# **dictator Documentation**

*Release 0.1.0*

**Taylor "Nekroze" Lawson**

August 10, 2013

# CONTENTS

<b>1</b>	<b>dictator</b>	<b>1</b>
1.1	Documentation . . . . .	1
1.2	Quickstart . . . . .	1
1.3	Features . . . . .	1
<b>2</b>	<b>Indices and tables</b>	<b>5</b>

# DICTATOR

Converts a plain text set of card game rules into a data structure loadable by Librarian.

## 1.1 Documentation

The full documentation is at <http://dictator.rtfid.org>.

## 1.2 Quickstart

Install dictator:

```
pip install dictator
```

Then use it in a project:

```
import dictator
```

## 1.3 Features

- TODO

Contents:

### 1.3.1 Installation

At the command line either via `easy_install` or `pip`:

```
$ easy_install dictator  
$ pip install dictator
```

Or, if you have `virtualenvwrapper` installed:

```
$ mkvirtualenv dictator  
$ pip install dictator
```

## 1.3.2 Usage

To use dictator in a project:

```
import dictator
```

## 1.3.3 Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

You can contribute in many ways:

### Types of Contributions

#### Report Bugs

Report bugs at <https://github.com/Nekroze/dictator/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

#### Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

#### Write Documentation

dictator could always use more documentation, whether as part of the official dictator docs, in docstrings, or even on the web in blog posts, articles, and such.

#### Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/Nekroze/dictator/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## Get Started!

Ready to contribute? Here's how to set up *dictator* for local development.

1. Fork the *dictator* repo on GitHub.

2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/dictator.git
```

3. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you're done making changes, check that your changes pass style and unit tests, including testing other Python versions with tox:

```
$ tox
```

To get tox, just pip install it.

5. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

## Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.6, 2.7, and 3.3, and for PyPy. Check [https://travis-ci.org/Nekroze/dictator/pull\\_requests](https://travis-ci.org/Nekroze/dictator/pull_requests) and make sure that the tests pass for all supported Python versions.

## Tips

To run a subset of tests:

```
$ py.test test/test_dictator.py
```

## 1.3.4 Credits

### Development Lead

- Taylor “Nekroze” Lawson <[nekroze@eturnilnetwork.com](mailto:nekroze@eturnilnetwork.com)>

## **Contributors**

None yet. Why not be the first?

## **1.3.5 History**

### **0.1.0 (11-08-2013)**

- First release on PyPI.
